

1) what is data?

→ data is a collection of raw facts, value or information that can be stored & processed.

2) what is database?

→ A database is an organized collection of data that can be stored, accessed, managed & updated efficiently.

3) what does DBMS stand for?

→ DBMS stand for Database management system.

4) what does RDBMS stand for?

→ RDBMS stand for Relational database management system.

5) what is mysql?

→ mysql is an RDBMS that uses SQL.

6) what is SQL?

→ SQL stand for structured query language. SQL language can be used to communicate with relational database.

7) Name any two database models?

→ 1) Network database

2) relational database.

8) what is a row in a database table?
 → a single entry in a table. (1)

9) what is the purpose of the DISTINCT keyword?

→ DISTINCT is used to remove duplicate value. (1)

10) what does the % wildcard represent in MySQL LIKE?

→ % represent the one or more characters in data using LIKE. LIKE (1)

* Section B-2

11) Differentiate between database & DBMS

Database	DBMS
1) Database is a collection of organized data	DBMS stands for database management system
2) It is stored data	general database system
3) eg:- student: Name age city	eg:-

12) Different between SQL & MySQL

SQL

- 1) SQL stands for structural query language
- 2) It is used to write query
- 3) SQL language used to communicate with relational database

MySQL

- MySQL is an RDBMS
- MySQL is a managed relational database.
- MySQL is used to SQL & RDBMS.

2

- 13) write any four SQL command categories & given one command for each

-
- 1) DDL :- Data Define language / create, drop
 - 2) TCL :- Transaction control language / commit
 - 3) DQL :- Data query language / select
 - 4) DCL :- Data control language it is used Grant, revoke

2

14)

IN

- It checks the value match in table
- It is used to query

BETWEEN

- It checks the given Range in table
- It is used to query

eg :- select * from student where age IN(10, 20);

select * from student where age BETWEEN (10, 20);

2

15) Explain IS NULL & IS NOT NULL with suitable SQL examples.

• IS NULL :-

IS NULL is used to find record a column has a no value.

- eg:- select * from student
where city IS NULL;

(2)

• NOT NULL :-

IS NOT NULL is used to find record a column has a value.

- eg:- select * from student
where city IS NOT NULL

(2)

* section - C

16) DBMS

1) DBMS stand for data
base management system

2) general database manag-
ement system

It can support different
Database model.

RDBMS

RDBMS stand for Relational
database management sys

RDBMS is a type of
DBMS

It is Based on relational
Database

(5)

(2)

- Q. 17) 1) Hierarchical Database :- Tree
 2) Network Database :- Interconnected records
 3) Relational Database :- Table
 4) Object-oriented Database :- objects
 5) NoSQL Database :- Key or values

- Q. 18) 1) NOT NULL :- value is not empty.
 2) UNIQUE :- It value is unique
 3) DEFAULT :- It is default value
 4) CHECK :- It is used to check records
 5) Foreign key :- A foreign key used to link two tables
 6) Primary key :- combination of not null & unique
- 19) SQL queries to :-

a) Display student whose age is 20
 → select * from student
 where age = 20;

o/p :-

Rahul	20	male	Delhi
Anjali	20	female	Jaipur

b) Display students whose age is between 20 and 23

→ select * from student
 where age BETWEEN (20, 23);

o/p :-

Rahul	20	male	Delhi
Priya	21	female	Mumbai
Amit	22	male	Patna
Rohit	23	male	Pune
Anjali	20	female	Jaipur
Pooja	21	female	Delhi

- c) Display student from Delhi or Mumbai using IN
 Select name, city ^{from} student
 where city IN("Delhi", "Mumbai");
 o/p :-

Rahul	Delhi
Priya	Mumbai
Manish	Delhi

- d) Display only female students?

→
 Select name, gender ^{from} student
 where gender = "female";

o/p :-

Priya	female
Neha	female
Anjali	female
Pooja	female

- e) Display students whose names start with P

→
 Select name from student
 where name LIKE "P%";

o/p :-

Priya ✓
 Pooja ✓

20)

- a) Names starting with A

Select name from student
 where name LIKE "A%";

o/p :- Amit

b) Names ending with a
 → select name from student
 where name LIKE "%a";
 o/p:-

Priya
 Neha
 Pooja

①

c) Display Names containing am
 → select name from student
 where name LIKE "%am%";
 o/p:- amit

①

d) Names having a as the second character
 → select name from student
 where name LIKE "-a%";
 o/p:-

Rahul
 manish

①

e) Names having a as the third character
 → select name from student
 where name LIKE "--a%";
 o/p:-

Pooja

①

21)

count() :- count the total numbers of records

sum() :- return the total sum of the value

① count(marks)

② sum(marks);

o/p :- 50

o/p :- 150

①
