4) write SQL query to print worker details who are also managers.

```
select worker * from worker w
Inner Join Title T on worker.worker_ID =
T.worker_REF_ID
where T.worker_Title = 'manager';
```

O/P

5) write SQL query to fetch duplicate record with matching data in specific fields of a table.

```
select first_name, last_name, count(*) from worker
Group by first_name, last_name
Having count(*) > 1;
```

O/P

6) write SQL query to show only odd rows from a table

```
Select * from worker
where mod(worker_ID, 2) = 1;
```

O/P

ID
1
3
5
7
9

7) write SQL query to show only even row from a table

→ Select * from worker
where mod(worker_ID , 2) = 0;

O/P
